

BFORC Platform — Project Context Document

1. Project Identity

- **Project Name:** BFORC Digital Platform
- **Parent Organization:** BrainsForCompassion (BFORC)
- **Domain:** bforc.in (Primary) | career.bforc.in (Subdomain — Career Portal)
- **Organization Type:** Women-led Social Impact Organization
- **Headquarters:** India
- **Target Launch:** 2026
- **Primary Audience:** Indian job seekers, social sector employers, NGO partners

2. Organizational Background

BFORC (BrainsForCompassion) is a fully women-led social impact organization that partners with NGOs and social enterprises to drive positive change and create equal opportunities for all genders. The organization collaborates with established partners including Jagriti Mahila Samiti, Jyoti Foundation, Akshaya Patra, Baala, Global AID, and Sahaj Sansthan, among others.

The organization operates on three core values:

- **Correct Thinking:** Innovation over perfection. Great ideas can come from anyone, and professionalism is not defined by appearance but by impact.
- **Honest Approach:** Unity, integrity, and the courage to follow one's convictions in bringing positive change.
- **Right Understanding:** Continuous pursuit of knowledge, wisdom, and ethical conduct in all endeavors.

3. Purpose and Vision

Why This Platform Exists

India's social sector — comprising NGOs, social enterprises, and impact-driven organizations — faces a critical talent gap. Passionate individuals who want meaningful careers in social impact often struggle to find the right opportunities. Conversely, organizations doing transformative work lack access to a dedicated talent pool that understands their mission.

BFORC exists to bridge this gap. By creating a dedicated ecosystem where compassion meets career, the platform serves as the connective tissue between purpose-driven professionals and organizations that need their skills.

The Larger Mission

Beyond job matching, this platform is an extension of BFORC's commitment to empowerment. In a country where women-led initiatives are still underrepresented in tech and leadership, building this platform is itself an act of demonstrating what women-led technology can achieve — elegant, impactful, and accessible to all.

4. Core Objectives

Primary Objective

To build a modern, fast, and intuitive digital presence for BFORC that includes a marketing website showcasing the organization's mission and partnerships, and a fully functional career portal enabling job seekers and employers in the social impact sector to connect seamlessly.

Specific Goals

For the Organization:

- Establish BFORC as a credible, professional entity in the digital space
- Showcase partnerships, impact stories, and organizational values effectively
- Create a sustainable revenue stream through the career portal's subscription model
- Reduce dependency on third-party job boards that do not understand the social sector's unique needs

For Job Seekers:

- Provide a women-centric, welcoming, and non-intimidating job search experience
- Enable intelligent resume parsing to reduce form-filling friction
- Offer tiered access (Free, Starter, Premium) so that cost is never a barrier to entry
- Ensure fast load times and mobile-first design, recognizing that many users in India access the internet primarily via smartphones

For Employers (NGOs / Social Enterprises):

- Offer a dedicated platform to reach candidates who are already aligned with social impact values
- Provide simple tools to post jobs, manage applications, and shortlist candidates
- Ensure the employer experience is as polished as the job seeker experience

5. Guiding Principles and Moto

Platform Moto

"Where Compassion Meets Career"

This is not merely a tagline. It is the operating philosophy of the platform. Every design decision, every feature, and every interaction should reinforce the idea that careers in social impact are viable, respectable, and professionally rewarding.

Design Philosophy

Women-Centric by Default:

- Visual language that conveys strength, warmth, and professionalism without falling into stereotypes
- Accessibility standards that ensure no user is left behind
- Content and imagery that reflect the diversity of Indian women in professional settings
- Safety and privacy considerations built into every feature

Simplicity Without Compromise:

The infrastructure and architecture are deliberately simple to keep costs minimal, but this simplicity must never translate to a compromised user experience. Performance, security, and reliability are non-negotiable.

Impact Over Vanity:

Features are built only if they serve the core mission. No bloated functionality. No unnecessary complexity. Every line of effort must move the needle on connecting people to meaningful work.

Zero-Cost Start, Scale with Purpose:

The platform begins on free-tier infrastructure not because of limitation, but because of discipline. Revenue from the career portal will fund upgrades organically, ensuring the platform grows sustainably.

6. Platform Architecture Overview

Dual-Site Structure

Site One — Marketing & Organizational Presence (bforc.in)

- Mission, vision, and values
- Partner NGO showcase
- Impact stories and blog
- Contact and partnership inquiry forms
- Newsletter subscription
- About the team and leadership

Site Two — Career Portal (career.bforc.in)

- User authentication (job seekers and employers)
- Job discovery, search, and filtering
- Intelligent resume parsing and auto-form-filling
- Job application tracking
- Employer dashboards for posting and managing jobs
- Subscription management (Free, Starter, Premium)
- Payment processing for paid tiers

Technology Philosophy

- **Frontend Framework:** Next.js with App Router

- **Language:** TypeScript
- **Styling:** Tailwind CSS with a custom design token system
- **UI Component System:** shadcn/ui combined with Framer Motion
- **Database, Authentication, and Storage:** Supabase
- **AI-Powered Resume Extraction:** Google Gemini 2.5 Flash-Lite
- **Payments:** Razorpay
- **Email Delivery:** Resend
- **Hosting and CDN:** Vercel and Cloudflare
- **Code Organization:** Turborepo monorepo structure

7. User Experience Commitments

Performance

- Pages must load in under two seconds on 3G networks
- Images and assets must be optimized and cached aggressively
- API responses must feel instantaneous

Accessibility

- WCAG 2.1 AA compliance minimum
- Full keyboard navigation support
- Screen reader compatibility
- Color contrast ratios that accommodate visual impairments

Mobile-First

- All design decisions begin with the mobile experience
- Touch targets are appropriately sized
- Forms are optimized for mobile input
- Resume upload works seamlessly on smartphones

Trust and Transparency

- Clear privacy policies explaining how resume data is used
- No hidden fees or dark patterns in subscription flows
- Employer verification process to prevent fraudulent job postings
- User data ownership — users can export or delete their data at any time

8. Business Model

Revenue Streams

- **Primary:** Subscription tiers for job seekers

- Free: Apply to up to 10 jobs per year, basic resume upload, community support
 - Starter (₹499/year): Apply to up to 50 jobs per year, priority resume parsing, basic support
 - Premium (₹899/year): Apply to up to 100 jobs per year, exclusive support, featured profile visibility
- **Secondary:** Future employer posting fees

Cost Discipline

The platform is architected to operate at near-zero fixed cost during the startup phase. Infrastructure expenses only increase when user growth justifies the investment.

9. Success Metrics

Phase One (Launch — 0 to 1,000 Users)

- Platform stability and uptime
- Core feature functionality
- User feedback and Net Promoter Score
- Mobile vs desktop usage split

Phase Two (Growth — 1,000 to 10,000 Users)

- Daily active job seekers
- Job application completion rate
- Resume parsing accuracy and user satisfaction
- Subscription conversion rate
- Employer job posting volume

Phase Three (Scale — 10,000+ Users)

- Revenue sustainability
- Successful placements
- Partner organization satisfaction scores
- Platform performance under load

10. Long-Term Vision

Future enhancements may include:

- Skills assessment and certification partnerships
- Mentorship matching
- Regional language support
- Mobile application
- Analytics dashboard

11. Non-Functional Requirements

Security

- HTTPS for all data transmission
- Resume malware scanning
- Secure authentication tokens
- Regular security audits

Privacy

- GDPR-inspired data handling
- Minimal data collection
- No sale of user data
- Clear data retention policies

Scalability

- Growth-ready database schema
- File storage optimization
- Edge-cached APIs
- Horizontal scaling readiness

Maintainability

- Comprehensive documentation
- Component-driven UI
- Type safety
- Automated testing

12. Conclusion

This document serves as the north star for all technical and design decisions related to the BFORC platform. Every feature built, every line written, and every pixel placed should align with the organization's mission, respect the user's time and trust, and demonstrate that women-led technology can be both beautiful and impactful.

The goal is not to build the most complex platform. It is to build the right platform — one that serves its users with dignity, operates with discipline, and grows with purpose.
